DETAILED SYLLABUS M.Sc

NAME OF DEPT/CENTRE: **DEPARTMENT OF CHEMISTRY**

1. Subject Code: **CYN-501** Course Title: **Quantum Mechanics, Symmetry & Group Theory**
2. Contact Hours: **L: 3** **T: 0** **P: 0**
3. Examination Duration (Hrs.): **Theory** 3 **Practical 0**
4. Relative Weightage : CWS 25 PRS 0 MTE 25 ETE 50 PRE 0
5. Credits: 6. Semester: **Autumn** 7. Subject Area: PCC
8. Pre-requisite: **Nil**
9. Objective: To provide basic concepts and mathematical treatment of atomic model, chemical bond, symmetry and group theory .

10. Details of Course:

Sl. No.	Contents	Contact Hours
1.	**Quantum Mechanics:** Postulates of Quantum Mechanics, observables, operators, functions, Schrödinger wave equation, hydrogen atom, transformation of coordinates, separation of variables, The φ equation, The Θ equation, The radial equation, quantum states, the electron spin, energy states of hydrogen atom, wave functions of hydrogen atom, radial distribution curves and angular dependence of wavefunction, graphical representation of orbitals, Multielectron systems, Term symbols, Introduction to approximation methods, Theories for chemical bonding.	**22**
2.	**Molecular Symmetry:** Symmetry elements and symmetry operations, symmetry elements and optical isomerism, symmetry point groups, various steps to identify point groups of molecular species and some illustrative examples, classes of symmetry operation	**6**
3.	**Group Theory:** Representation of a group, the great orthogonality theorem and its consequences, character tables, representation for cyclic groups, the direct product, reducible and irreducible representations, analysis of reducible representations, reducible representations for molecular motions and its analysis	**8**
4.	**Applications of Group Theory:** Group theory and Quantum mechanics . vanishing integrals , orbital overlap, symmetry adapted linear combinations, molecular shapes, symmetry of normal modes of vibrations, prediction o f infrared and Raman activity, electronic transitions	**6**
	Total	**42**

Suggested Books

Sl. No	Name of Authors/Books/Publisher	Year of Publication
1.	Simons J. and Nichols J., "Quantum Mechanics in Chemistry" Oxford University Press	1997
2.	Levine I. R., "Quantum Chemistry" Pearson Education, Inc.	2003
3.	Szabo A., and Ostlund N. S. "Modern Quantum Chemistry" Tata McGraw Hill	1989
4.	Cotton F. A., Chemical Applications of Group Theory" Wiley	1999

1. Subject: **CYN-503** Course Title: **Thermodynamics & Surface Chemistry**
2. Contact Hours: **L-3; T-0; P-0**
3. Examination Duration (Hrs) Theory **03** Practical **00**
4. Relative weightage: CWS **25** PRS 0 MTE 2**5** ETE **50**
5. Credits: **03** 6. Semester: **Autumn**
7. Pre-requisite: **Nil**
8. Subject Area: P**CC**
9. Objective of Course: To familiarize students with thermodynamics aspects of chemical equilibria, phase equilibria, surface process and ionic systems.
10. Details of Course:

S.No.	Particulars	Contact Hours
1	**Laws of Thermodynamics:** Third law of thermodynamics, Nernst theorem, attainability of absolute zero, the thermodynamic treatment of phase equilibria, thermodynamic properties of solutions, chemical potential, chemical potential of real gases and fugacity, thermodynamic function of mixing, thermodynamic treatment of ideal and non-ideal solutions, concept of activity, excess thermodynamic functions.	14
2	**Statistical Mechanics:** Statistical Method, probability of distribution and ensembles, Microcanonical ensemble, entropy and probability, Canonical ensemble, Boltzmann distribution, partition function and their evaluation and relation with thermodynamic properties, evaluation of entropy of gasses by statistical method, Grand Canonical ensemble and other ensembles: partition function	12
3	**Surface Chemistry:** Surface phenomenon, electrical phenomenon of interphases, adsorption of gases by solids, type of adsorption, BET theorem, determination of surface area of solids, adsorption from solution.	8
4	**Thermodynamics of Ionic Systems:** Thermodynamics of reversible and irreversible electrochemical systems, thermodynamic foundation of theory of ionic interaction and calculation of energy of ionic interaction, interpretation of electrical conductance of electrolytes, thermodynamic treatment of diffusion potential. Thermodynamics of different types of chemical processes accounting in living systems, metabolic and biosynthetic reaction.	8
	Total	42

NAME OF DEPTT/CENTRE: **DEPARTMENT OF CHEMISTRY**

1. Subject code: **CYN-505** Course Title: **Analytical Techniques**
2. Contact Hours: **L: 3** **T: 0** **P: 0**
3. Examination Duration (Hrs): **Theory:** 3 **Practical:** 0
4. Relative Weightage: **CWS:** 25 **PRS:** 0 **MTE:** 25 **ETE:** 50
5. Credits: 3 6. Semester: **Autumn** 7. Subject Area: **PCC**
8. Pre-requisite: Nil
9. Objective: To impart the fundamental knowledge of different analytical methods
10. Details of the Course:

S. No.	Contents	Contact Hours
1.	**Atomic spectrometry**: Principle of atomic absorption and atomic emission spectrometry, instrumentation, Atomic fluorescence spectrometry	7
2.	**Separation methods**: Solvent extraction: Partition law and its limitations, distribution ratio, separation factor, factor influencing extraction, multiple extractions. Chromatography: theory of column chromatography, retention time, retention value, capacity factor, concept of plate and rate theory, resolution, column performance, paper and thin layer chromatography, Ion exchangers	14
3.	**Electroanalytical methods**: Polarography – principle, instrumentation, limitations, applications to qualitative and quantitative analysis, Ameperometric and Bioamperometric titrations	7
4.	**Nuclear methods**: Concept of radiotracers and radiolabelling, radioisotope production and their properties, radioactivity and radiation measurement, activation analysis, isotope dilution method.	14
	Total	**42**

11. Suggested Books:

S. No.	Name of Authors/Book/ Publisher etc.	Year of Publication/ Reprint

2	Mendham J., Denny R.C., Barnes J.D. and Thomas M.J.K., "Vogel's Text Book of Quantitative Chemical Analysis" 6th Ed., Pearson Education	2004
3	Skoog, D.A., West D.M., Holler F.J. and Crouch S.R., " Fundamentals of Analytical Chemistry" 8th Edition, Thomson Brooks/Cole.	2004
4	Fifield F.W., and Kealey D., "Principles and Practice of Analytical Chemistry", 5th Ed., Blackwell Science.	2000
5	Ewing G.W., "Instrumental Methodsof Chemical Analysis", 5th Ed., McGraw Hill.	2004

1. Subject : **CYN-507** Course Title: **Advanced Organic Chemistry-I**
2. Contact Hours : **L-3,** **T-1,** **P-0**
3. Examination Duration (Hrs) Theory **03** Practical **-**
4. Relative weightage: CWS: 2**5** PRS - MTE : **25** ETE : **50**
5. Credits: **03** 6. Semester: **Autumn**
7. Pre-requisite: **Nil**
8. Subject Area : **PCC**
9. Objective of Course : To introduce students with the concepts of spectroscopy, Stereochemistry, reactive intermediates and related concepts.
10. Details of Course:

S. No.	Particulars	Contact hours
1	**Spectroscopy:** General introduction to UV, IR and NMR spectroscopy their application to identification of simple organic compounds. Shifts of bands with solvents, isolated and conjugated double bonds, Woodward – Fieser rules, polyenes, carbonyl compounds, aromatic systems. Stereochemical non-equivalence – diastereotopic and enantiotopic protons, use of deuterium oxide to identify exchangeable hydrogens.	14
2	**Disconnection Approach:** Synthons and synthetic equivalents, definitions, guidelines, functional group interconversions, use of acetylenes and aliphatic nitrocompounds in organic synthesis; two-group C-C disconnections – Diels-Alder reaction, 1,3- & 1,5-difunctional compounds (Michael addition & Robinson annulation); order of events in organic synthesis, chemoselectivity, reversal of polarity (umpolung), cyclisation reactions, and amine synthesis.	8
3	**Organometallic compounds:** **Transition metals-mediated reactions:** Organocopper intermediates; reactions involving organopalladium intermediates – palladium-catalyzed nucleophilic substitution and alkylation, Heck reaction, palladium-catalyzed cross coupling, and carbonylation reactions; reactions involving organonickel compounds; reactions involving rhodium and cobalt; organometallic compounds with □-bonding. Carbon-carbon bond-forming reactions of compounds of boron, and tin: Synthesis and C-C bond-forming reactions of organoboron, and organotin compounds.	8
4	**Organo silicon- and sulphur chemistry** **Silicon:** Silicon and carbon compared, silicon Baeyer-Villiger rearrangement, nucleophilic substitution at silicon, silyl ethers and alkyl silanes as protecting groups, aryl and vinyl silanes, migration of silicon from carbon to oxygen. **Sulphur:** Sulphur stabilized anions, thioacetals, allyl sulphides, sulphonium salts, sulphonium ylids, sulphur stabilized cations, chiral sulphoxides in synthesis.	8
5	**Introduction to petrochemicals:** First generation of petrochemicals, second generation of petrochemicals, third generation of petrochemicals, catalysis in petrochemical processes, future of petrochemicals.	4
	Total	42

3	Silverstein R.M. and Webster F.X., "Spectroscopic Identification of Organic Compounds", 6th Ed., Wiley Inc.	2002
4	Pavia D.L., Lampman G.M. and Kriz G.S., "Introduction to Spectroscopy", 3rd Ed., Harcourt Inc.	2001
5	Maiti S., "Introduction to petrochemicals", 2nd Ed., Oxford & IBH.	2002

NAME OF DEPTT./CENTRE: **Department of Chemistry**

1. Subject Code : **CYN-511** Course Title : Advanced Laboratory-I
2. Contact Hours : L: 0 T: O P: 12
3. Examination Duration (Hrs.): **Theory** 00 **Practical** 12
4. Relative Weightage: **CWS** 0 **PRS** 50 **MTE** 0 **ETE** - 0 **PRE** 50
5. Credits : **6** 6. Semester : **Autumn** 7. Subject Area: P**CC**
8. Pre-requisite: Nil
9. Objective: To impart practical knowledge and skills in physical, inorganic and organic laboratories.
10. Details of Course:

S.No.	Content	Hours
1.	**Organic Chemistry** Exp. Involving crystallization/ distillation/ purification, e.g: (i) Phthalic acid from hot water (ii) Naphthalene form ethanol. Simple synthesis of organic compounds, e.g.: (i) p-nitracetanilide, (ii) p-nitroaniline, (iii) p-amino azobenzene, (iv) adipic acid from cyclohexene (vii) cinnamic acid from benzaldehyde. Estimations of organic functional groups, e.g. : (i) glucose (ii) phenol (iii) glycine etc. Separation techniques: (TLC, column chrom., UV-Vis), e.g, (i) Determine R_f values and purity of organic compounds using TLC Separate a binary mixture of organic compounds using column chromatography.	4 /week
2.	**Inorganic Chemistry** Semi-micro qualitative analysis involving 8 radicals including interfering radicals. Estimation of metal ions by gravimetric-cum-volumetric analysis: (i) Ag (I) gravimetrically and Cu(II) volumetrically (ii) Cu(II) gravimetrically and Zn(II) volumetrically (iii) Fe(III) gravimetrically and Ca(II) volumetrically. Gravimetric analysis of a mixture of two metal ions. Synthesis of simple coordination compounds: Chrome alum, tetraamine copper(II) sulphate, $Fe(acac)_3$ and $Mn(acac)_3$.	4 /week
3.	**Physical Chemistry** Viscometry: Measurement of viscosity of solutions of a polymer, and calculation of average molecular weight of a polymer. Determination of standard reduction potential of Cu/Cu^{2+} and Zn/Zn^{2+} electrodes. Determination of pk_1 and pk_2 of dibasic acids. Kinetics of saponification of an ester. Determination of specific and molar rotation of sucrose solution using polarimeter. To study the kinetics of H^+-catalysed hydrolysis of sucrose using polarimeter. Verification of Freundlich adsorption isotherm and Langmuir adsorption isotherm. Study of oscillatory reactions. Determination of the equilibrium constant for $Kl+l_2 = Kl_3$ reaction using partition method. Determination of the dimerization constant of acetic acid/benzoic acid. Study of variation of angle of rotation with concentration of sucrose/tartaric acid using polarimetry. To determine the velocity constant for the saponification of ethyl acetate, using the conductance method at 30^0C. Determine the fluorescence quantum yield of the given substance.	4 /week

NAME OF DEPTT./CENTRE: **Department of Chemistry**

1. Subject Code: **CYN-509** Course Title: **Coordination Chemistry**

2. Contact Hours: **L: 3** **T: 0** **P: 0**

3. Examination Duration (Hrs.): **Theory 3** **Practical 0**

4. Relative Weightage**: CWS 25 PRS 0 MTE 25 ETE 50 PRE 0**

5. Credits**:** 6. Semester**: Autumn** 7.Subject Area**: PCC**

8. Pre-requisite**: Nil**

9. Objective: To impart basic and advanced concepts of coordination chemistry.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Structure, Bonding and Properties of Transition Metal Complexes**: Different types of ligands and coordination geometry (symmetry considerations), coordination number, isomerism (recapitulation), HSAB concept, thermodynamic stability, successive and overall stability constants, determination of stoichiometry (Job's method) and stability constants by spectrophotometric, potentiometric and polarographic methods, Irving-William series, chelate and macrocyclic effect.	6
2.	**Stereochemical Aspects of Coordination Complexes:** Stereoisomerism in inorganic complexes, isomerism arising out of ligand and ligand conformation, chirality and nomenclature of chiral complexes, optical rotatory dispersion (ORD) and circular dichroism (CD).	5
3.	**Metal-Ligand Bonding**: Overview of crystal field and ligand field theories of 4-, 5- and 6-coordinated complexes, d-orbitals splitting in linear, trigonal, octahedral, square planar, tetrahedral, square pyramidal, trigonal-bipyramidal and cubic complexes, measurement of CFSE (d^1 to d^{10}) in weak and strong ligand fields, Jahn-Teller distortion, nephelauxetic series, variation of lattice energy, ionic radii and heat of hydration across 1^{st} row transition metal ions.	6
4.	**Molecular Orbital Theory (MOT) of Coordination Compounds**: Composition of ligand group orbitals, molecular orbital energy diagrams of octahedral, tetrahedral, square planar complexes including both σ and π bonding, angular overlap model.	7
5.	**Electronic Spectra of Coordination Compounds:** Energy states from spectral terms of d^n configurations, selection rules for ligand-field and charge transfer transitions in metal complexes, band intensities, factors influencing band widths, splitting of various terms, Orgel and Tanabe-Sugano diagrams of octahedral and tetrahedral d^n complexes, calculation of ligand field parameters, luminescence, phosphorescent complexes.	7
6.	**Molecular Magnetism and Magnetic Properties of Coordination Compounds:** Fundamental equations in molecular magnetism, magnetic susceptibility and magnetic moment, diamagnetic and paramagnetic behavior of transition metal complexes, spin-orbit coupling effects (L-S coupling and j-j coupling), orbital angular moment and its quenching in octahedral and tetrahedral complexes, temperature independent paramagnetism (TIP) of complexes, spin cross over phenomenon, spin admixed states, metal-metal direct spin interaction and super exchange spin-spin interaction through bridging ligands, ferromagnetic, anti-ferromagnetic, ferromagnetic behaviour of transition metal compounds, molecule based magnetic materials.	11

5. Credits**:** **3** 6. Semester**: Spring** 7.Subject Area**: PCC**

8. Pre-requisite**: Nil**

9. Objective: To impart basic and advanced concepts in organometallic chemistry.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Main Group Organometallics:** Introduction, review of comparative aspects of synthetic methods, reactivity and bonding in ionic, covalent, electron deficient and electron rich organometallic compounds.	5
2.	**Important Reactions of Organometallics**: Kinetics and mechanism of ligand substitution (associative and dissociative), oxidative addition and reductive elimination, transmetallation, migratory insertions, reactivity at metal-bound ligands.	4
3.	**Structure and Bonding in Organometallic Compounds:** Introduction, 18 electron rule and its application to π-acceptor ligands, limitations of 18 electron rule, description of bonding models for π-acceptor ligands, including CO, alkenes (Dewar-Chatt-Duncanson model) and tertiary phosphines, physical evidence and consequences of bonding.	4
4.	**Organotransition Metal Chemistry:** σ-Bonded transition metal-alkyls, - aryls, -alkenyls(vinyls), -alkynyls(acetylides), reactions in σ–organyls: homolytic cleavage, reductive elimination, electrophilic cleavage, insertion, β-metal hydrogen elimination, α-abstraction or α-elimination.	6
5.	**Transition Metal Organyls with Metal-Carbon Multiple Bonding:** Transition metal-carbenes, -carbynes, -bridging carbenes/carbynes, reactions of carbene/carbyne complexes: ligand substitution, nucleophilic, electrophilic attack, dismutation, ligand coupling reactions.	**6**
6.	**Organotransition Compounds with Multicenter Bonds (non-classically bonded):** Concept of hapticity, transition metal complexes of alkenes, Ziese salt, allenes, alkynes, allyls, butadienes; cyclic π-metal complexes of cyclobutadienes, cyclopentadienyls, arenes, cycloheptatrienyls and cyclooctatetraenes; reactions and bonding in ferrocene; stereochemical non-rigidity in organometallic compounds and fluxional compounds, bimetallic and cluster complexes.	**8**

7.	**Applications of Transition Metal-Organic Compounds in Catalysis:** Hydroformylation, hydrogenation of olefins, synthesis of chiral pharmaceuticals, olefins metathesis, Wacker process, polymerization (Zeigler-Natta Catalyst), cyclooligomerisation of acetylene using nickel catalyst (Reppe catalyst), polymer-bound catalysts and importance of organometallic compounds in certain biological systems.	6
8.	**Bioorganometallic Chemistry:** Organometallo-therapeutic drugs, enzyme inhibitors, biological importance of Vitamin B_{12} and coenzymes and their biomimetic studies.	3

2. Contact Hours : **L-3; T-0; P-0**
3. Examination Duration (Hrs) Theory **03** Practical **00**
4. Relative weightage: CWS 2**5** PRS - 0 MTE **25** ETE **50**
5. Credits: **03** 6. Semester **Spring**
7. Pre-requisite: **Nil**
8. Subject Area : **PCC**
9. Objective of Course : To impart basic knowledge to students of the kinetics and mechanism of thermal, photochemical and radiation chemical reactions.
10. Details of Course:

S.No.	Particulars	Contact hours
1	**Reaction Dynamics:** Arrhenius equation, the concept of activation energy, theoretical calculation of energy of activation using potential energy surface diagram, simple collision theory, absolute reaction rate theory, comparison between gas phase and solution reactions.	10
2	**Type of reactions:** Kinetics of chain reactions, detections of radical and kinetics of HBr, H_2O_2 reactions, explosion limits, elementary idea of unimolecular reactions, application of following to the reaction kinetics solvent effect, kinetic isotope effect and salt effect, experimental technique for studying the fast reaction kinetics, kinetics of acid, base and enzyme catalysis, Hinshelwood mechanism of catalysis.	16
3	**Photochemistry:** Quantum yield, actinometry-physical and chemical actinometers, experimental techniques for continuous photolysis. Electronic transition in organic molecules, photochemistry of carbonyl compounds – Norrish Type I and Norrish Type II cleavages, photoreduction, H-atom abstraction, photocycloaddition to ketones to ethylenes, Paterno-Büchi reaction, photochemistry of α, β-unsaturated ketones, esters, acids, benzoquinones, nitrite, photofries rearrangement, Barton reaction. Primary photophysical processes of atoms and diatomic molecules, spectroscopic notations, Franck-Condon principle and its applications, rates of absorption and emission, lifetimes of electronically excited states and its fate, quenching of excited states species, radiationless transition and predissociation, energy transfer processes, Wigner's spin rule, Woodward Hoffman's rule, mechanistic analysis of photochemical reactions by spectroscopic techniques, sources of high energy radiation, chemical dosimetry, comparison between photo- and radiation chemistry.	16

8. Subject Area: **PCC**
9. Objective of Course: To impart advanced knowledge on reaction mechanism and pericyclic reactions.
10. Details of Course:

S.No.	Particulars	Contact hours
1.	**Conformation and Chemical Reactivity:** Internal forces and strains, Conformational analysis of acyclic molecules (alkanes, halogeno alkanes and other substituted derivatives), conformational energy, diagrams, dynamic stereochemistry, reactivity of conformationally rigid and mobile diastereomers, quantitative correlation between conformation and reactivity, conformational analysis of cyclic system - mono, di and polysubstituted cyclohexanes , regiospecific, regioselective reactions, base-induced and pyrolytic eliminations, solvolysis, esterification, hydrolysis , oxidation, reduction, neighbouring participation reactions of acyclic and cyclic molecules. Brief idea on fused ring system- decalin , perhydroanthracene, perhydrophenanthrene and cyclopentanoperhydrophenanthrene	14
2	**Organic reaction Mechanism:** Types of Mechanism, types of Reactions, importance of product analysis, reactive intermediates and their detection, information from reaction kinetics , reaction energetics, energy profile diagrams, activation parameters, isotope effects (primary and secondary kinetic hydrogen isotope effects), LFER- Hammett, Taft equations, solvent effects, kinetic and thermodynamic controls, Hammond postulates, guide lines for proposing reaction mechanism.	14
3	**Pericyclic Reactions:** Orbital symmetry, frontier orbitals of ethylene, 1,3-butadiene, 1,3,5-hexatriene, allylic system, FMO approach, Woodward-Hoffman correlation diagram method, pericyclic reactions under thermal and photochemical conditions; electrocyclic reractions-conrotatory and disrotatory motions, [4n], [4n+2]allyl systems, cyclo addition-[4n], [4n+2] systems with emphasis on [2+2] and [4+2] cyclo additions,stereochemical and substituent effects, sigmatropic rearrangements-shifts of H and carbon moieties, detailed treatment of Claisen, Cope, Sommelet-Hauser rearrangements.	14

NAME OF DEPTT./CENTRE: **Department of Chemistry**

1. Subject Code : **CYN-508** Course Title : Advanced Laboratory-II
2. Contact Hours : L: 0 T: O P: 12
3. Examination Duration (Hrs.): **Theory** 00 **Practical** 12
4. Relative Weightage: **CWS** - **PRS** 50 **MTE** 0 **ETE** - **PRE** 50
5. Credits : **6** 6. Semester : **Spring** 7. Subject Area: P**CC**
8. Pre-requisite: Nil
9. Objective: To impart practical knowledge and skills in physical, inorganic and organic laboratories.
10. Details of Course:

S. No.	Content	Hours
1.	**Organic Chemistry** 1. Qualitative analysis: identification of binary mixtures of organic compounds, Identification and characterization of organic compounds through m.p., derivatization, IR etc. 2. Extraction, Isolation and purification of natural products: Application of soxhlet, column chrom. and TLC, UV-vis, IR and NMR, (i) Pigments from spinach leaves (ii) Piperine from black pepper (III) Caffeine from tea leaves. 3. Multistep Synthesis, e.g.: (i) Benzophenone-benzophenone oxime - benzanilide (ii) Benzoin, benzyl, benzilic acid (iii) Diphenic acid (iv) anthranilic acid	4/week
2.	**Inorganic Chemistry** Synthesis of potassium tris(oxalate) aluminate, potassium tris(oxalate) chromate and potassium tris(oxalate) ferrate, and their characterization by metal determination, various spectroscopic (I.R. and U.V.-Vis) methods, Magnetic behavior, and photochemical behavior of iron complex. Preparation of $[Ni(NH_3)_6]Cl_2/So_4$, $[Ni(en)_3]Cl_2/SO_4$, bis(salicylaldimine)-nickel(II), and analysis by different methods, viz. IR, UV-visible spectroscopy. Comparison of the spectra of $[Ni(H_2O)_6]^{2+}$, $[Ni(NH_3)_6)^{2+}$ and , $[Ni(en)_3]^{2+}$ and qualitative verification of the spectrochemical series, quantitative estimation of nickel by spectrophotometry. Synthesis and spectrophotometric study of copper complexes: (i) Synthesis of bis(salicylaldimine) copper(II) and cis-bis(glycinato) copper(II), (ii) record the spectra of Cu^{2+} (bis(salicylaldimine) copper(II) and cis-bis(glycinato) in water,, NH_3 , ethylene diamine and glycine, and arrange the ligands in order of increasing field strength and (iii) quantitative estimation of copper by spectrophotometer. Study of the complex formation between Fe(III) and thiocyanate/salicylic acid/ sulphosalcylic acid or between Ni(II) and o-phenonthroline, and find the formula and determination of formation constant of the complex spectrophotometrically (Job's method and molar ratio method).	4/week
3.	**Physical Chemistry** Analysis of a mixture of a metal cation by electroanalytical methods. Determination of cations in soil/fertilizer by flame photometry. Determination of cations in lubricating oils/alloys using AAS. To calculate the surface energy of given organic liquid from surface tension versus temperature relationship. To study the fluorescence quenching. To determine the variation of miscibility of phenol in water with temperature and to find the critical solution temperature. To determine ΔG, ΔH, and ΔS for the reaction, Zn (Hg)+2;AgCl(S)= ZnCl2(aq)+2Ag(s) from e.m.f measurements. To determine the ionization constant of bromophenol blue indicator by Spectroscopy.	4/week

1. Subject: **CYN-552** Course Title: **Electroanalytical Chemistry**
2. Contact Hours: **L-3; T-0; P-0**
3. Examination Duration (Hrs) Theory **03** Practical
4. Relative weightage: CWS: **25** PRS: **0** MTE: 2**5** ETE: **50** PRE: 0
5. Credits: **03** 6. Semester: **Spring**
7. Pre-requisite: **Nil**
8. Subject Area: **PEC**
9. Objective of Course: To introduce theoretical and practical knowledge of various electroanalytical systems
10. Details of Course:

S.No.	Particulars	Contact Hours
1	**Basics of Polarography:** Polarography and advantages of using dropping mercury electrode. Operational amplifiers concept and design of polarographic circuit using op-amps. Ilkovic equation, theory of diffusion, kinetic ,adsorption and catalytic currents. Controlled potential electrolysis and coulometry. Determination of number of electrons. Reversible, quasi-reversible and Irreversible electrode processes. Pulse and Differential pulse polarography and their superiority over DC polarography. A.C.Polarography	14
2	**Voltammetric Techniques:** Linear and cyclic sweep voltammetry, Randles Sevcik equation, effect of sweep rate and evaluation of adsorption characteristics of reactant or product using CV. Coupled chemical reactions and their characterization. Characteristics of commonly used working electrodes such as glassy carbon, platinum, pyrolytic graphite and reference electrodes SCE and Ag/AgCl. Enzyme catalysed oxidations of biomoleules viz., uric acid, guanine, adenine etc and their comparison with electrochemical reactions. Anodic and cathodic stripping and determination of metal ions, pollutants and biomolecules using stripping voltammetry.	14
3	**Sensors:** Amperometric and voltammetric sensors. Modified electrodes and their advantages over conventional electrodes in sensing variety of metals and biomolecules. Nanomaterials in electrode modification- C60, single wall and multi wall carbon nanotubes. Preparation and characterization of modified surfaces, Applications of sensors in doping.	7
4	Polarographic and cyclic voltametric studies of coordination compounds containing one or more redox centers, coupled chemical reactions — EE and EEE mechanisms; Stability constant of complexes.	7
	Total	42

1. Subject: **CYN-572** Course Title: **Heterocyclic Chemistry**
2. Contact Hours: **L-3; T-0; P-0**
3. Examination Duration (Hrs) Theory **03**
4. Relative weightage: CWS **25** PRS 0 MTE **25** ETE **50**
5. Credits: **03** 6. Semester **Spring**
7. Pre-requisite: **Basic organic chemistry and synthetic methods**
8. Subject Area: **PEC**
9. Objective of Course:

To give the students a broad understanding of the major classes of 5- and 6-membered ring heterocyclic compounds.

10. Details of Course:

S. No.	Particulars	Contact Hours
1.	**Heterocycles** Systematic nomenclature of heterocyclic compounds (Hantzsch-Widman, Replacement & Fusion methods), Biological importance of heterocyclic compounds.	**2**
2	**Five-membered heterocycles with one heteroatom.** Chemical structures of furan, pyrrole and thiophene, and degree of aromaticity. General syntheses methods for 5-member rings. Paal-Knorr, Feist-Benary, Hantzsch and Knorr syntheses. Electrophilic substitution in this kind of rings, reactants employed and orientation of the substituent on the ring.	**10**
3	**Benzoderivatives of five-membered heterocycles with one heteroatom.** Preparation of indole and carbazole derivatives. Fisher, Bischler, Madelung and Reissert syntheses. Preparation and reactivity of benzofurans (coumarins), benzothiophenes, dibenzofurans and dibenzothiophenes.	**8**
4.	**Pyridines, quinolines and isoquinoles** Influence of the imine group on the reactivity of the pyridine ring. Nucleophilic and electrophilic substitutions on pyridine, quinolines and isoquinolines. Comparison of reactivity with benzene and naphthalene. Preparation of pyridine salts and pyridine *N*-oxides and synthetic applications. Skraup, Friedlander, Pfintzinger Bischler-Napieralski and Pictet syntheses.	**10**
5.	**Heterocycles with 5 or 6 members and two or three heteroatoms** Syntheses and reactivity of Oxazoles, thiazoles, oxadiazoles, thiadiazoles, benzothiazoles, benzothiadiazoles, triazole, benzotriazole, pyrimidines, pyrazines, quinoxalines, triazines, etc.	**6**
6.	**New materials derived from heterocycles** Syntheses of indigo, mauveine, cyanines, tetrathiafulvalenes and related dyes, organic sensitizers for DSSC, electron donors and acceptors for organic solar cells, optical chemosensors, organic semiconductors for thin-film transistors.	**6**
	Total	**42**

1. Subject: **CYN-582** Course Title: **Chemical Applications of Nanoscale Materials**
2. Contact Hours: **L-3;** **T-1;** **P-0**
3. Examination Duration (Hrs): Theory: **03**
4. Relative weightage: CWS 2**5** PRS MTE 2**5** ETE **50**
5. Credits: **03** 6. Semester: **Spring**
7. Pre-requisite: **Nil**
8. Subject Area: P**EC**
9. Objective of the Course: To introduce various aspects of chemical applications of nanoparticles.
10. Details of Course:

S.No.	Particulars	Contact hours
1	Overview of nanomaterials and nanoscale metal Oxides.	**2**
2	**Reactivity and Characteristics of Nanoparticles:** Increased reactivity of nanoscale materials, reasons for high reactivity, effect of size and shape of nanocrystals on reactivity, comparison of nanocrystalline versus macro-crystalline materials in terms of reactivity.	5
3	**Metal Oxide Nanoparticles: A**erogel method to produce materials with very high surface area, textural studies, determination of size, defects in nanocrystalline metal oxides, comparison of nanoscale metal oxides with other porous materials such as zeolites, clays etc. Typical reactions used for testing reactivity; SO_2 and CO_2 adsorption, H_2S adsorption, CCl_4 adsorption, adsorption of stimulant molecules of chemical warfare agents.	9
4	**Chemical Modification of Nano Metal Oxides:** Prevention of agglomeration, impregnation / incorporation of suitable chemical agents on the surface of nanoparticles, increasing dispersibility in solution.	5
5	**Applications of Nano Metal Oxides and Modified Nano Metal Oxides as Adsorbents:** Adsorbents based on nanostructured materials, destructive adsorption, decontamination of toxic chemicals, detoxification of surrogates of chemical warfare agents, air purification, desulfurization, destruction of chlorinated compounds. Mixed metal oxides, Lewis acid incorporated nanocrystalline metal oxides, model reactivity studies using modified nanocrystalline metal oxides.	13
6	**Biocidal Applications:** Killing bacteria, spores and other harmful germs using halogenated nanoparticles, mechanism of biocidal action, advantages of using biocides based on nanoparticles.	4
7	**Toxicology:** Concerns in using nanoparticles, inhalation toxicity, oral toxicity, governmental regulations, case studies on toxicology, precautions.	4

4. Relative weightage: CWS **25** PRS - MTE **25** ETE **50**
5. Credits: **03** 6. Semester: **Autumn**
7. Pre-requisite: **Elementary knowledge of molecular spectroscopy**
8. Subject Area: **PEC**
9. Objective of Course: To provide basic knowledge of various spectroscopic techniques required for the identification and elucidation of the structure of molecules.
10. Details of Course:

S.No.	Particulars	Contact hours
1	**Introduction to spectroscopy:** Different aspects of molecular spectroscopy, the Born-Oppenheimer approximation, transition probability, oscillator strength, the integrated absorption coefficient.	2
2	**Microwave Spectroscopy**: Classification of rotors, intensity of rotational lines, population of energy levels, non-rigid rotation, anharmonocity and centrifugal distortion, effect of isotopic substitution. Rotation spectra of linear, spherical top and asymmetric top polyatomic molecules, microwave technique.	4
3	**Infrared Spectroscopy:** Vibrating rotor, vibration of polyatomic molecules, harmonic and anharmonic oscillators, types of vibration bands – overtones, combination bands, Fermi resonance phenomenon, the finger print region, FTIR spectroscopy and applications.	4
4	**Raman Spectroscopy*:*** Rayleigh and Raman scattering, polarisabilities, rotational and vibrational Raman spectra, selection rules, polarization of the light and Raman effect, Laser Raman spectroscopy.	4
5	**UV Visible spectroscopy**: Electronic spectra, Franck-Condon Principle, predissociation spectra, Fortrat diagram. Electronic spectra of organic compounds, types of transitions, solvent effects, empirical rules of $\square_{max}$, conjugated polyene and enone systems, transition in inorganic complexes, charger transfer spectra in organic and inorganic systems.	4
6	**Magnetic Resonance Spectroscopy**: Nuclear moments, nuclear spin states in a magnetic field and the resonance phenomenon, relaxation processes, Bloch equations outline of NMR detection methods; chemical shifts and spin-spin coupling, spectra of a two-spin system (A_2, AB and AX cases); interpretation of simple first order spectra of organic molecules. NMR lineshapes and molecular dynamics. FT-NMR spectroscopy, measurement of relaxation times, introduction to ^{13}C NMR spectroscopy.	7
7	**Electron Spin Resonance:** detection of ESR spectra, spectra of simple organic radicals, g-values and hyperfine structure, the McConnell relation; spectra of inorganic complexes, zero field splitting and Krammers degeneracy. General introduction to double resonance experiments, Overhauser effect, DNDOR and ELDOR, 2-dimensional NMR, Zeugmatography and biological applications.	6
8	**NQR and Mössbauer Spectra**: Nuclear quadrupole moment and EFG tensors, quadrupole coupling constants and asymmetry parameters, pure NQR and Zeeman spectra of spin 1/2 and spin 3/2 systems; the Towners-Dailey theory and interpretation of NQCC in terms of bond characteristics. The Mössbauer effect, isomer shifts and NQCC's ^{57}Fe spectra of complexes, other Mössbauer nuclei, applications.	6
9	**Photoelectron Spectroscopy:** The photoionisation processes, Auger and autoionisation processes, deexcitation by fluorescence, cross-sections; outline of the XPS, UPS and Auger techniques and their applications: correlation with band structure of solids, application to organic molecules and surface structure studies.	5

8. Subject Area: P**EC**
9. Objective of Course: To familiarize the students with mechanisms of inorganic reactions and inorganic biochemistry.
10. Details of Course:

S.No.	Particulars	Contact hours
1	**Inorganic Reaction Mechanism:** Substitution reactions in octahedral complexes*:* exchange reactions, acid- and base-hydrolysis, annation reaction, solvolytic and catalysed reactions. Substitution reactions in square-planar complexes*:* effect of non-participation of ligands on reactivity, *cis* and *trans* effects.	6
2	**Electron transfer reactions:** Outer- and inner-sphere mechanisms, factors affecting electron transfer reaction rates, theories of electron transfer reactions, solvated electron.	5
3	**Photochemistry of metal complexes:** Introduction to inorganic photochemistry, photochemically excited states and excited state processes for transition metal complexes, photochemical reactions of coordination compounds (Cr and Ru complexes), types of photochemical reactions in transition metal complexes: substitution, decomposition, fragmentation, rearrangement and redox reactions. Applications of photochemical inorganic reactions in synthesis, catalysis, biological processes and in lasers.	6
4	**Inorganic biochemistry:** Metalloproteins and enzymes*:* Role of metal ions in the active sites, structure and functions of metalloproteins and enzymes containing Mg, Ca, V, Mn, Fe, Co, Ni, Cu and Zn ions. Detailed structure and mechanistic studies of the following: Mn-photosystem-II, catalase, pseudocatalase; oxygen carriers haemoglobin, myoglobin; non-porphyrin oxygen carriers hemerythrin, hemocyanin; Fe-ribonucleotide reductase, cytochrome c oxidases, cytochrome P-450s; Ni-urease, hydrogenase; nitrogen fixation; Cu-blue copper protein, tyrosinase, galactose oxidase, superoxide dismutases; Zn-carbonicanhydrase, carboxypeptidase, alcohol dehydrogenase.	5 12
5	**Chemical Toxicity and metallotherapy:** Toxic chemicals in the environment; toxic effects of arsenic, cadmium, lead, mercury, carbon monoxide, cyanide and other carcinogens; metal containing drugs in therapy; interaction of heavy metal ions with DNA; DNA cleavage; structure-activity relationship and mode of action.	8

9. Objective of Course: To bring student's knowledge the concepts of pharmaceuticals and biosynthesis of natural products.
10. Details of Course:

S.No.	Particulars	Contact hours
1.	**Pharmaceuticals :** Introduction to the clinically used drugs such as sulphonamides, antimalarials, arsenical drus, antibiotics, the penicillins, cephalosporin C, streptomycin, chloramphenicol, macrolide group of antibiotics, polypeptide antibiotics. General pharmacology, qualitative aspects of drug action, receptors, quantitative aspects of drug-receptor interactions, therapeutic index, various modes of administration of drugs, gram positive and negative micro-organisms, NSAID's and their mode of action. Representative antibacterial drugs , anticancer, anti HIV drugs, their structure mode of action.	13
2	**Enzymes, coenzymes, fermentation:** Enzymes- classification, mode of action, key features of active site, Michaelis- Menten model for kinetic properties of enzymes, enzymic inhibition-competitive and non-competitive. Enzymic oxidation of simple biomolecules. Coenzymes- catalytic role of TPP, COASH, coenzyme-I, coenzyme-II, AMP,ADP,ATP,FMN, FAD and other high energy molecules, their biogenetics, coupled reactions.	5
3	Biogenetic pathways and Biosynthesis of Natural Products Acetate pathway- biosynthesis of fatty acids, coenzyme-A and its role, prostaglandins and physiological activities, poly ketides, biosynthesis of aromatic compounds, tetracyclines Mevalonate pathway-biosynthesis of isoprenoids,mono and sesquiterpenes, bicyclic diterpenes, kaurene, gibberellic acid, squalene, biosynthesis of steroids, lanosterol, zymosterol, cholesterol, calciferol, stigmasterol and their biological activities. Phytoene-biosynthesis α, β, γ carotenes and other carotenoids, 11-cis-Retinal and its biological role Shikimic acid pathway- Biosynthesis of aliphatic and aromatic amino acids, coumarins,lignans, flavones, isoflavones, flavanones,anthocyanidins Biosynthesis of alkaloids- alkaloids of the pyrrolidine and piperidine series ,nicotine, anabasine, tropine, atropine, cocaine ,sedamine , coniine, amphetamine, mescaline, ephedrine, dopamine, thebaine, codeine, morphine,serotonin, melatonoin and other physiologically active alkaloids	13
4	**Nucleic acids:** Human Genome project , Structure and synthesis of nucleosides and nucleotides, DNA sequencing, DNA, replication of DNA, mutation, genetic code, role of nucleic acid in the biosynthesis of proteins, DNA finger printing , DNA modification and chemical carcinogenesis, P.C. reactions	11

5. Credits: **03** 6. Semester **Autumn**

7. Pre-requisite: **Organic Chemistry** 8. Subject Area: P**EC**

9. Objective of Course: The course is designed to familiarize the student with the principles and applications of asymmetric synthesis.

10. Details of Course:

S.No.	Particulars	Contact hours
1.	**Introduction**: Significance of chirality and stereoisomeric discrimination, asymmetry, determination of enantiomer composition, determining absolute configuration, general strategies for asymmetric synthesis, common definitions in asymmetric synthesis and stereochemistry.	4
2	**α-Alkylation and Catalytic Alkylation of Carbonyl Compounds:** Chirality transfer (intra-annular, extra-annular and chelation-enforced intra-annular); preparation of quaternary carbon centers and α-amino acids; nucleophilic substitution of chiral acetal; chiral catalyst induced aldehyde alkylations: asymmetric nucleophilic addition; catalytic asymmetric additions of diethylzinc to ketones; asymmetric cyanohydrination and α-hydroxyphosphonylation.	5
3	**Aldol and Related Reactions:** Substrate-controlled aldol reactions: oxazolidones, pyrrolidones, aminoalcohols and acylsultam systems as chiral auxiliaries; reagent-controlled aldol reactions: aldol condensations induced by chiral boron compounds, aldol reactions controlled by Corey's reagents, aldol condensations controlled by miscellaneous reagents; chiral catalyst-controlled aldol reactions: Mukaiyama's system, asymmetric aldol reactions catalyzed by chiral Lewis acids, catalytic asymmetric aldol reaction promoted by bimetallic catalysts (Shibasaki's system); double asymmetric aldol reactions; asymmetric allylation reactions; asymmetric allylation and alkylation of imines; Henry reaction.	6
4.	**Asymmetric Oxidations: Asymmetric epoxidation of allylic alcohols:** Sharpless epoxidation; characteristics, mechanism and modifications and improvements of Sharpless epoxidation; selective opening of 2,3-epoxy alcohols: opening by external nucleophiles, intramolecular nucleophiles, metallic hydride reagents and organometallic compounds; Payne rearrangement, asymmetric desymmetrization of *meso*-epoxides; asymmetric dihydroxylation and aminohydroxylation of olefins; epoxidation of unfunctionalized olefins: catalytic enantioselective epoxidation of simple olefins by salen complexes and by porphyrin complexes; chiral ketone-catalysed asymmetric oxidation of unfunctionalised olefins; catalytic asymmetric epoxidation of aldehydes; asymmetric oxidation of enolates: substrate- and reagent-controlled reactions; asymmetric aziridination and regioselective ring opening of aziridines.	5
5.	**Asymmetric Diels-Alder and Other Cyclization Reactions***:* Chiral dienophiles: acrylate, α,β-unsaturated ketone, chiral α,β-unsaturated N-acyloxazolidinones, chiral sulfinyl-subtituted compounds; chiral dienes; double asymmetric cycloaddition; chiral Lewis-acid catalysts: Narasaka's catalyst, chiral lanthanide catalyst, bissulfonamides chiral acyloxy borane catalysts, Brønsted acid-assisted chiral Lewis-acid catalysts, bis(oxazoline) catalysts; hetero Diels-Alder reactons: oxo- and aza-Diels-Alder reactions; intramolecular and retro-Diels-Alder reactions; asymmetric dipolar cycloaddition and asymmetric cyclopropanation.	6
6.	**Asymmetric Catalytic Hydrogenation and Other Reduction Reactions**: Chiral phosphine Ligands for homogeneous asymmetric catalytic hydrogenation synthesis, asymmetric catalytic hydrogenation of C=C bonds; asymmetric reduction of carbonyl compounds: reductions using BINAL-H, transition metal-complexes and oxazaborolidine catalyst systems; asymmetric reduction of imines; asymmetric transfer of hydrogenation and asymmetric hydroformylation.	5

7.	**Biocatalysis: Introduction; hydrolases – lipases, esterases and proteases in organic synthesis**	3
8.	**Asymmetric Organocatalysis**: Introduction; nucleophilic addition to electron-deficenet C=C double bonds: intermolecular Michael addition (C-, N-, O-, S-, and Se-nucleophiles), intramolecular Michael addition; nucleophilic addition to C=N double bonds: Strecker reaction (chiral diketopiperazines, guanidines, ureas and thioureas, N-oxides as catalysts), Mannich reaction (direct Mannich reaction – products with one and two stereogenic centers), β-lactam synthesis, aziridination and hydophosphonylation of imines; nucleophilic addition to C=O double bonds: hydrocyanation, aldol reactions, β-lactone synthesis via ketene addition, Morita-Baylis-Hillman reaction, allylation reaction, Darzens reaction; cycloaddition reactions: Diels-Alder, hetero-Diels-Alder reactions, dipolar cycloaddition reaction; large scale applications of ogeneral aspects and considerations, economy of catalyst, stability of catalyst and handling and recycling issues, conversion and catalytic loading.	8

5. Credits: **03** 6. Semester **Autumn**
7. Pre-requisite: **Basic organic chemistry and spectroscopy**
8. Subject Area: **DEC**
9. Objective of Course:

The course will deal with rapidly emerging areas in organic electronic materials.

10. Details of Course:

S.No.	Particulars	Contact hours
1.	**Introduction**: General description of conjugated organic oligomers, dendrimers and polymers. Conjugated polymer structural types (polyacetylenes, polyphenylenevinylenes, polyphenyeleneethynylenes, polyfluorenes, polythiophenes, polyphenylenes, polyanilines, water soluble polymers, phosphorescent polymers). Carbon-rich compounds, Cross-conjugation.	6
2	**Synthesis**: Useful synthetic methods for the construction of conjugated organic oligomers and polymers. C-C and C-Heteroatom coupling reactions - Historical context and latest developments. Representative examples. Mechanistic consideration. All-benzenoid polycyclic aromatic hydrocarbons: synthesis, self-assembly and applications in organic electronics. Solid state strategy for the preparation of carbon-rich polymers.	10
3	**Properties**: Electronic structure of organic semiconductors - Relationship between two view points: solid state physics and molecular picture of conjugated organics. Electrochemistry, electrochromism and energy level measurements. Charge transport (electronic conduction in photoactive molecular-wires). Luminescence. Energy transfer and electron transfer. Excitation dynamics in organic semiconductors. Fluorescence sensing. Non-linear optical properties.	14
4.	**Applications**: Field-effect transistors, Light-emitting diodes, photovoltaics and solar cells - Device architectures, materials, characterization and theory of operation. Biosensors - Electrochemical detection, fluorescence optical amplification (protein & DNA and RNA sensing), solid state applications (DNA chips and micro arrays).	12

5. Credits: **03** 6. Semester A**utumn**
7. Pre-requisite: **Basic chemistry and spectroscopy**
8. Subject Area: **PEC**
9. Objective of Course:

Supramolecular chemistry is a new emerging domain lying amidst chemistry, biochemistry, physics, and materials science. The course will be a journey from the chemistry of the entities generated by intermolecular noncovalent interactions into their application in electronic devices.

10. Details of Course:

S. No.	Particulars	Contact Hours
1.	***Fundamentals of Supramolecular Chemistry:*** Definitions, brief overview and examples; types of noncovalent interactions (H-bonding, electrostatic (ion-ion, ion-dipole, dipole-dipole), hydrophobic and steric, π-π, Van der Waals); concepts of host-guest complexation with examples from ionophore chemistry; complexation of ions; molecular baskets, chalices and cages: podands, crown ethers, cryptands, calixarenes; macrocyclic effect; complexation of neutral molecules; self-assembly; molecular boxes and capsules; self-complementary species and self-replication.	**8**
2	***Supramolecular Chemistry and Biological Processes:*** Cation binding (biological relevance, affinity and selectivity, artificial ionophores, natural and artificial cation channels); Anion and neutral molecule binding (relevance, factors affecting affinity and selectivity, anion and neutral molecule binding in biology, artificial hosts for anions, katapinands, guanidinium receptors, receptors based upon Lewis acid-base concepts, enantioselective anion recognition, cyclodextrins, anion binding based upon ion-dipole interactions, simultaneous anion-cation binding, neutral molecule recognition and binding).	**8**
3	***Synthesis of Supramolecules:*** Synthesis of macrocycles; synthesis of receptors for cations anions, and neutral molecules; non-covalent synthesis; Metal directed self-assembly of complex supramolecular architecture: rotaxanes, catenanes, etc.	**6**
4.	***Physical Methods in Supramolecular Chemistry:*** Spectroscopy in supramolecular chemistry; determination of stoichiometry, stability constants, and geometry of complexes; binding constant determination; dynamics of supramolecular systems (solid state vs. solution behavior).	**8**
5.	***Application of Supramolecular Chemistry:*** Supramolecular catalysis; membrane transport; sensors; phase-transfer catalysis; supramolecular devices and switches; memories, logic gates and related systems; molecular scale machines (mechanical rotors, gears, brakes, etc.; conversion of light into fuels and light into electricity.	**12**
	Total	**42**

4. Relative weightage: CWS 2**5** PRS - - MTE 2**5** ETE **50**
5. Credits: **03** 6. Semester **Spring**
7. Pre-requisite: **Nil**
8. Subject Area: P**EC**
9. Objective of Course: The course will deal with frontier areas in inorganic biochemistry. Metalloproteins from cellular and molecular biological point of view will be discussed along with structural biology of metalloproteins.
10. Details of Course:

S.No.	Particulars	Contact hours
1.	**Homeostatic Mechanism:** Cellular Components and Pathways in the context of metal ions, homeostatic mechanism in cell – prokaryotes to eukaryotes to human. Evolutionary pathway metals, metallocofactors and prosthetic groups.	3
2	**Metal ion Transport and Assembly of Metalloproteins:** Details of the metal transport in Yeast and in higher organisms: Proteins involved in uptake and efflux, metallochaperones, transcription factors (Ace1 and Mac1, copper sensor). Assembly of metals in protein, photoactivation. Heme synthesis, covalent and non-covalent interactions of heme with protein, Assembly of heme in heme proteins- cytochrome c vs cytochrome b5, heme chaperoning and role of CCME. Identification of a protein as heme protein, Heme Oxygenase, Reconstitution of hemeproteins with modified heme/other cofactors and their application in biocatalysis and electron transfer.	6
3	**Molybdenum and Tungsten in Biology:** Hyperthermophilic and thermophilic bacteria. Mo and W containing enzymes, mechanism of catalytic activity- nitrogenase, sulfite oxidase, nitrate reductase, acetylene hydratase, xanthine oxidase, DMSO reductase. Structural and functional modeling of Mo and W sites and their applications as biocatalysis.	6
4.	**Iron in Biosystem:** **Non-Heme: (i) Iron-Sulphur Proteins (ii) Other non-heme iron proteins:** Lipoxygenase and its implication in cancer research Nitrile Hydratase and its application to industry. . Structural and functional modeling of heme and non-heme metal-sites and their applications as biochemistry and biocatalysis with examples such as nitrile hydratase, lipoxygenase, acetylene coenzyme synthetase (ACS), DAP1 **Heme:** Catalytic mechanism of Nitric Oxide Synthease and Heme Oxygenase,	5
5	**Metal ions and Disease:** Role in Alzheimer's disease: Aggregation of proteins, role of copper, zinc and iron. Application of radiochemistry for the identification of metal ions. Metal binding in prion protein: Binding of copper and manganese. Manganism: Occupational exposure, manganese toxicity, effect on calcium channel, proteomics of manganese toxicity. Inorganic NO-donor and their applications.	8
6	**Bioinformatics and Postgenomic Era:** Search of metalloprotein and metal binding motif (eg Dap1). De novo design of proteins, artificial heme binding protein, target protein. Modeling with protein structure from protein data bank. DNA intercalation and electron transfer through DNA, RNA metal interactions.	5
7	**Biomineralization:** Biomineralization in the context of bone, teeth and mollusk cells, application into materials science and biomimetic engineering **Bioorganometallic Chemistry:** Introduction and applications.	4
8	**NMR Structural Biology and Structure Solution of Metalloproteins:** Selection of a target protein, Plasmid preparation and overexpression, reparation of sample for NMR. Overexpression of heme protein: cytochrome c vs cytochrome b**.** Labeling of protein by 15N and 13C, standardization of overexpression and purification (heme as well as nonheme). Details of the NMR Experiments for Spectral Analysis, paramagnetic NMR, structure solution	5
